

On-site Liquid Waste Solidification in Minutes!

APPLICATIONS

- ✓ HORIZONTAL DIRECTIONAL DRILLING
- ✓ HYDRO EXCAVATION
- ✓ TUNNELING & MICROTUNNELING
- ✓ ENVIRONMENTAL
- ✓ MINING
- ✓ STORM WATER PONDS

Changing the Way Companies Deal with Liquid Waste

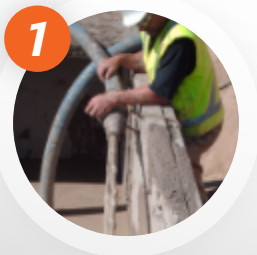

Our proprietary reagents solidify liquid waste on site in minutes - making it easier, more efficient and less costly to dispose.

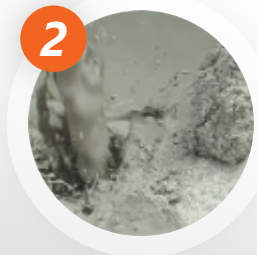

Did you know?

Conventional liquid waste disposal techniques add amendments like Portland cement, fly-ash, lime or sawdust to meet solids criteria for transportation to landfill, expanding volume by up to 300%. MetaFLO's engineered reagents typically add only 1%!

ON SITE LIQUID WASTE **SOLIDIFICATION IN 3 EASY STEPS**

Liquid waste collected in a pond, tank etc.

Solidification reagent is added and mixed on site.

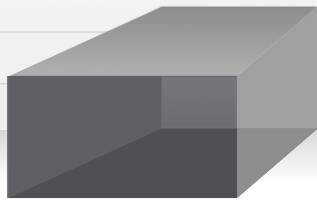

Liquid sets up as a solid in minutes and is ready for disposal.

WHY CHOOSE METAFLO FOR LIQUID WASTE MANAGEMENT?

MetaFLO is a Practical, Cost Effective & Sustainable Option

- » **MetaFLO reagents are fast** – Immediately converts liquid waste to a stackable solid in minutes.
- » **MetaFLO reagents are cost effective** – dump trucks (and fewer of them) for transportation vs costly VAC trucks.
- » **MetaFLO reagents are less risky**: fewer trucks, no liquid transport, waste shipped directly to final disposal site.
- » **MetaFLO reagents are environmentally friendly**: Non-Hazardous, non-toxic & chemically inert; Reduces GHG emissions by requiring less trucks for transport.
